

Object's Enterprise Java Practice

Over the last few years, there has been a significant shift in the Enterprise Java space as more companies look to gain the technical and financial rewards offered by adopting open source products. Object Consulting's expertise in Enterprise Java – both open source and from major vendors – means we can architect and develop quality enterprise systems for your business needs which integrate seamlessly with existing systems and are based on the best technologies available.

Why Object for Enterprise Java?

Object Consulting has a long and rich history working with Enterprise Java and was the first to deploy enterprise scale Java applications in Australia. We continue to deliver Java solutions to blue-chip Australian companies and remain on the leading edge. As early adopters we understand its strengths and weaknesses.

We have the ability to work with all mainstream Java vendors. In operation since 1989, Object's delivery of solutions comprise Object's iP and knowledge combined with vendor products to solve business problems in a low risk and cost effective manner.

The Open Source Experts

Today's Java technology landscape is broad and diverse. At one end it is dominated by several large vendors, at the other end there are an increasing number of smaller proprietary and open source products. Appropriate use of open source technology can increase security, stability and flexibility while reducing both the time to market and the ongoing costs of maintenance and licensing. The challenge is to find and then successfully integrate an open source solution that is right for your company and meets your company's unique and changing business requirements.

Object continues to be actively involved in the open source community as advocates and contributors as well as through a series of strategic partnerships with open source providers across all layers of the Enterprise technology stack – bringing you the experience in building and delivering commercial systems using a wide range of Enterprise Java vendor products.

“ Object provides you with a deep understanding of and experience in open source and Enterprise Java technologies, and with the capability to deliver an appropriate solution for your business problems. ”

Lachlan Gartside
Lead Consultant and Enterprise Java Practice Lead, Object Consulting

Customer focus

- ✔ The value proposition in IT today is more than technical and product excellence; it is about having access to the people who can help make sense of it all.
- ✔ Object bridges the gap between business strategy and IT, ensuring users get what they really need, by adopting a very collaborative engagement model across IT and business stakeholders.
- ✔ Demystifying the technology with clear unambiguous communications is central to delivering solutions that link business processes to quality maintainable IT solutions.
- ✔ Object's practice teams have been formed around delivering solutions that companies need to prosper in changing times.

Object's Enterprise Java Practice

Object's Enterprise Java Practice is specifically focused on driving innovation with Java-based technologies. Through the Enterprise Java Practice, we are able to keep abreast of the latest developments on the Java landscape and the implications these changes have for our customers. The Practice allows Object to operate as thought leaders in the Java community, to build and manage a repository for best practice techniques for working in the Java space, and to maintain its leading edge in providing customer centric solutions.

Enterprise Java Solutions

Enterprise Content Management

Object has combined its considerable skill and experience in the area of Enterprise Content Management (ECM) with the strength and reliability of the industry's leading open source software vendors to provide a compelling Enterprise Content Management solution offering.

With a deep knowledge of all of the different aspects of ECM methodology – from gathering requirements to modelling content items, designing workflows, building and testing templates and views – Object Consulting can help you successfully navigate all phases of deploying an ECM solution.

We bring together all the key components of ECM systems to companies of different sizes and business problems. With the ability to combine any or all of Document Management, Web Content Management and Collaboration, Object understands that a well tailored and designed ECM solution can drastically increase productivity across your business.

By utilising the power of open source technology, we can help your business gain all of the productivity and process benefits that a content management system can bring while removing the barriers and road blocks to adoption including vendor lock-in and greatly reduced upfront investment costs.

Quantum

Quantum is Object's productivity suit for designing, developing and integrating Enterprise Java applications. Quantum leverages open standards and open source to avoid vendor lock-in and consists of a collection of pre-configured reusable modules and components, open source reference architectures, a reusable component library and build tool. As a productivity suit, Quantum will significantly decrease time to market for core business applications with increased quality and rock solid reliability.

Quantum's core component offerings include eForms, Workflow and Rules Engine built on top of an open source reference architecture. Each core component is implemented using a generic reference architecture, allowing easy configuration to suit the unique problems faced by your business. Alongside the core components sit a streamlined configuration utility for installing development environments, a knowledge base of best practice techniques for working in the Java space and a component library. Quantum is a proven tool and embodies years of production-proven experience in developing enterprise wide solutions.

Why Object

- ✔ For over two decades, Object has successfully delivered innovative and quality solutions to Australia's Top 500 organisations.
- ✔ Our 280-strong team delivers services and projects ranging from business consulting, technical services and specialised training programmes - supported by best practice tools, processes and methodologies.
- ✔ At Object, we pursue innovation through investments in our people and capabilities. Object's Practices provide the path to improving capability and delivering innovation to our clients.
- ✔ Object's Practices have a continuous focus on building iP and solutions around changing customer needs and business challenges.
