

Enterprise Registry Management System

Are you looking to replace a legacy system and automate your workflow processes?
Do you have complex legislation to support and business rules you need to manage?
Do you need a secure portal for your customers or external stakeholders?

Our ERM system is the leading enterprise grade Registry Management system. It is used by Australian government agencies to enable customers to apply for services and programs, provide their credentials including proof of identity, and pay for their applications online. Administrators and third-party stakeholders use ERM to assess applications, approve registrations, and track transaction progress.

Data that is secure. Workflow and rules that are flexible.

Systems without limits

Are you looking for a secure, robust registry system and want to improve your workflow and organisational efficiency through automation?

Contact us now for a free demo.
